

1/72 scale
 "Bear Paw" snow shoes
 for UH-1D/H and AB212/412
 Set # WBA 72041

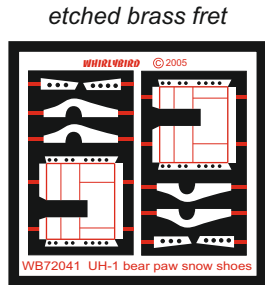

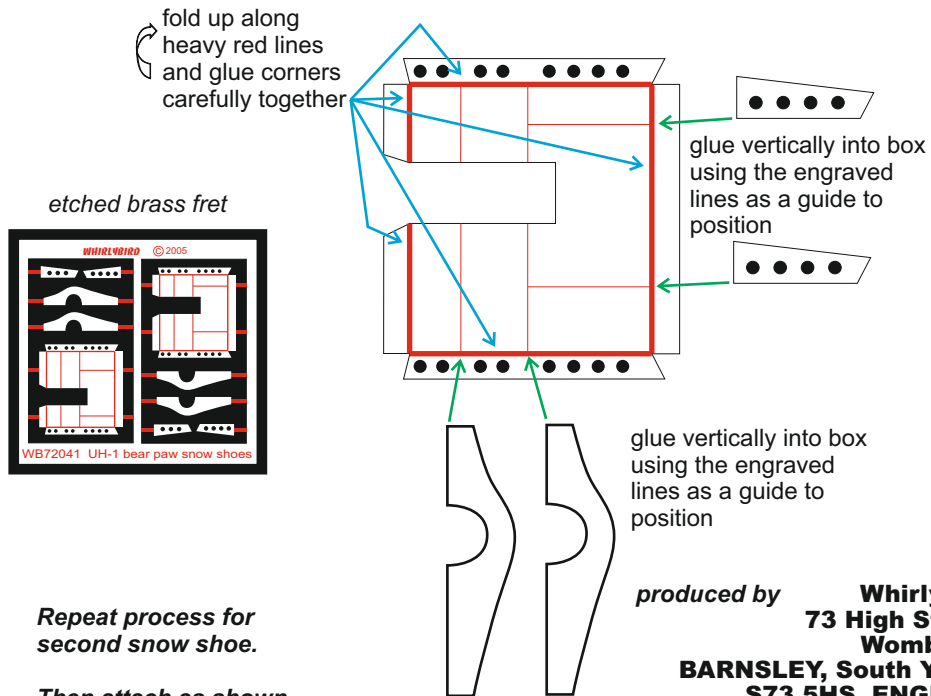

Introduction

This etched brass accessory set provides one pair of "bear paw" snow shoes for the Bell UH-1D/H and AB212/412 helicopters. This equipment is used particularly by the German and Austrian armed forces and others in Alpine areas and conditions of heavy snow, and prevents the aircraft from sinking into soft snow on landing.

Always check references for application to a particular aircraft.

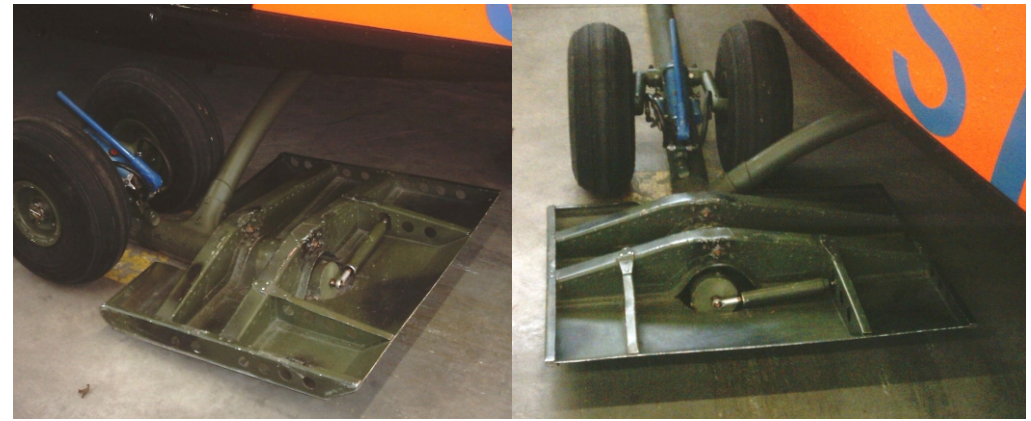

Preparation: general instructions

Remove the etched brass pieces carefully from their framework with a sharp modelling knife or cutters (remember that etched brass is quite springy, and can easily disappear into the carpet unless care is taken while cutting). Attach with cyanoacrylate adhesive using the drawings below as a guide for positioning, and paint as desired using model paints.

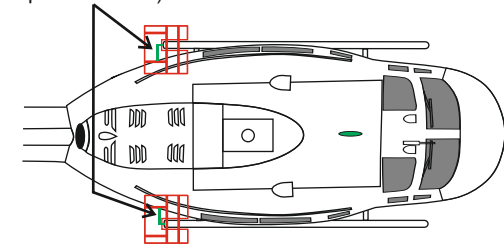

Repeat process for second snow shoe.

Then attach as shown in the photographs overleaf.

add from micro-rod or stretched sprue (see photos above)

Thanks to Phil Adams for his help with information and photographs
