The sleek F-14 Tomcat is the most advanced long range interceptor ever created. Designed as an air superiority aircraft, the F-14 is unsurpassed in the areas of speed, maneuverability and range, and features an awesome array of advanced weapons systems. Powered by two Pratt and Whitney Turbo-Fan engines, the mighty Tomcat utilizes the high thrust of its engines and variable sweep wings to achieve an incredible degree of agility, as well as attain an impressive top speed in excess of 1500 miles per hour. The position of the wings is controlled by a mach sweep programmer that maximizes speed and minimizes drag.

Firepower ranges from an internal M61A1 Vulcan cannon to lethal Hughes Phoenix air intercept missiles. Carried on two aerodynam-

ic fairings, the Phoenix has a range greater than one hundred miles. The Tomcat is also equipped with AIM-7E/F Sparrow missiles and AIM-9L Sidewinder missiles. The incredible AN/AWG-9 fire control radar provides target tracking and range data for the Vulcan cannon and the complete array of air-to-air missiles.

The Tomcat is fully deployed in United States Navy squadrons operating from the imposing fleet of U. S. Navy aircraft carriers. The aircraft has a length of 61 feet 2 inches, and an extended wing span of 64 feet 1½ inches. Combat takeoff weight is in the range of 55,000 pounds. The superior performance of the U. S. Navy F-14 Tomcat will enable this amazing aircraft to remain in front line service for many years to come.
