1/144 EA-18G Growler

Shelf
Oddity

9 8 12 13 stacked 3 folded 11 10 10 15

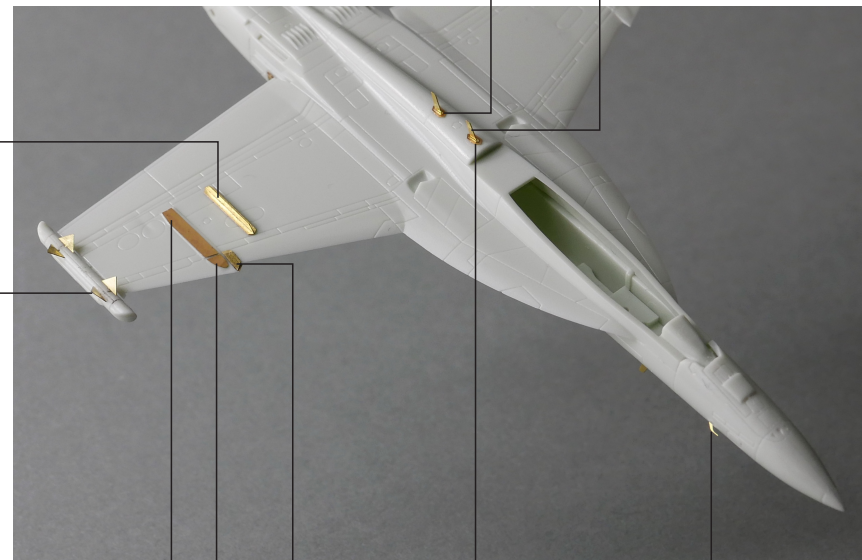

What can I say about the EF... EF/A... Eeee (you now see why the etch and the label state "EF") ...EA-18G Growler.

You probably think "but the Revell kit is good enough, why tinker with it".

Well, why not?

But the truth is - the kit is really quite good. We only add the small and really necessary bits:

- wing tooth shape (3 folded in ~half)
- wing fence (2) and its baseplate (1)
- wing overlay plates (4, 5, 6, 7)
- ECM wingtip pods/winglets (8 - drill the 0.3mm locating holes before installation)
- antennae (10) with base plates (11)
- rear ECM antennae (12 stacked on top of 13)
- front fuselage aero data probes (14 - again 0.3mm hole will help locating and stabilising this small bit)
- support plates (15) which can be further enhanced by adding 0.25mm wire in the center.

1 2 8 starboard: 4 5 port: 6 7 3 folded 11 14

And the usual mantra: consult reference photos.
