

RUSSIAN T-72B3 MAIN BATTLE TANK 2017

MOSCOW VICTORY DAY PARADE

ITEM NO: UA72102

Accepted in 1985 and mass-produced since 1988, the T-72B(M) MBT (Ob.187) has protection level comparative to that of the contemporary T-80U, but has a noticeably poorer FCS and vision aids and is underpowered. It is the last model of the (in)famous T-72 line, because the T-72BU MBT, successor to T-72B(M), received a new designation, T-90. However, T-72B(M) tanks and older T-72s upgraded to T-72b(M) standard are the most numerous tanks fielded with the Russian military. With the current financial problems, it will likely remain a widespread use well into the 21st century.

In addition to the basic model, there exists the T-72BK command variant that has been fielded since 1987. The variant differs in radio and navigational equipment, as well as the presence of an auxiliary power unit.
