

## 3D Print Files Consumer Licence

Designs of accessories for reproducing on a 3D printer, available under license for consumers for private use.

- **See the terms and regulations for using files [\\$4a link](#).**

### How to print accessories from the file?

The product should be printed on a resin printer such as Elegoo Mars 3 or similar from companies such as Anycubics, Phrozen, etc. The minimum resolution needed to obtain a good effect is 4K. The effect will be even better at higher resolutions, such as 8K.

The file should be processed in a program that prepares files for the printer, the so-called Slicer, appropriate for your printer. In the case of Elegoo Mars 3, it is the ChituBox program.

Basic printer and software skills are required to print the product.
