

## 1/48 North American Bronco Closed Canopy instructions for ICM kits

Parts included in the set, take care in removing the parts from the support bases.

I have removed the wipers in most cases to aid in packaging.

Position and direction of internal latches, although this is shown on the open canopy sections, the same applies for the closed canopy.

The handles on the kit parts will need to be carefully removed and the printed handles glued in the same positions.

To assemble the 3D printed parts to the kit parts, super glue would be suggested.
