Check profile of chosen aircraft to confirm if stenciled wing roundels or white wingtips were applied

As a follow up to the 1/32 Macchi C.205 decal sheet released in 2009, a decision was made to produce a series of BF.109 Regia Aeronautica & ANR decals, in the same scale, providing as wide a choice as possible. It's worth remembering that, a few years ago, Hasegawa released a limited edition Regia Aeronautica 1/32 BF109 kit but only two schemes were provided in the kit! This Regia Aeronautica decal sheet, printed by Fantasy Printshop, will be followed by the second ANR set in due course.

This instruction sheet should be used in conjunction with Hasegawa's BF 109 colour and decal placement guides (where appropriate). Stencil markings are provided on this sheet, but Hasegawa's stencils decals can be used.

Regia Aeronautica rarely re-camouflaged aircraft obtained from other airforces. The Luftwaffe camouflage remained intact on all BF.109's, with only German identifying markings obscured with whatever paint was to hand. Grigio Azzurro Chiaro is commonly accepted as being the colour most likely to have been used for this purpose. In some cases extra mottling, most likely Verde Oliva Scuro, was also applied.

Two styles of rudder crosses are provided on the sheet, but please check with photos as they were not always a standard size. The same applies to the width and position of the white fuselage band, which tended to vary on each aircraft.

Please refer to each profile for other specific details, such as spinner colour(s), wing tips, fuselage band, yellow lower cow! etc. Markings are duplicated in the same positions on the starboard to those shown on the port side.
