Shrouded in mystery . . . it's very existence denied by the U.S. Air Force, the F-117A was announced in April of 1990 as the world's first operational Stealth fighter. Specifically designed to evade enemy radar by being virtually invisible to emitted radar waves, the F-117A was designed and constructed by the aviation wizards of the famed Lockheed "Skunk Works". This strange aircraft is a unique assemblage of flat external surfaces and the advanced airframe relies on non-metallic materials throughout. The aircraft is a single-place design that is powered by two F-117 non-afterburning engines. To reduce the infrared heat

signature and minimize detection, the exhaust outlets are fitted with diffusers that mix cool air with heated exhaust gases to spread and cool the exhaust plume. Armament is carried internally in an internal weapons bay.

Your 1/72nd scale replica utilizes snap-together assembly to simplify construction. Every precise detail is scaled from actual photos of the real aircraft. The shrouded engine intakes are readily visible as are the unusual exhausts. Molded in black plastic, the finished model can be mounted on a two-piece display to portray the "Nighthawk" in flight.
