

### Avro 626

The Model 626 was developed by Avro from the company's Model 621 for export to smaller air forces, the idea being that the 626 would be a single aircraft that could carry out training as well as a number of other roles. Compared with the pilot training oriented 621, the 626 had an additional cockpit with a scarff ring and carried equipment for air navigation, wireless and gunnery training (a third cockpit was provided behind the normal two-seat configuration). Like the Tutor, it was a conventional fabric-covered, metal airframe with single bay wings, with open cockpits in line astern. The prototype was first flown in 1930.

- **Crew:** Two or three
- **Length:** 26 ft 6 in (8.08 m)
- **Wingspan:** 34 ft 0 in (10.36 m)
- **Height:** 9 ft 7 in (2.92m)
- **Range:** 386 km
- **Service ceiling:** 14,800 ft (4,511 m)
- **Powerplant:** 1 × Armstrong Siddeley Cheetah V 260 hp
