Famed as the United States Navy's last propeller-driven attack aircraft, the ungainly Douglas Skyraider served operationally for more than twenty years. Although they were recognized primarily as attack aircraft, variants of the Skyraider appeared as early warning pickets, night attack aircraft, and anti-submarine warfare airplanes. More than 3100 Skyraiders were constructed over a span of twelve years.

The Skyraiders first saw combat in the wartorn skies over Korea but achieved aviation history long after most military strategists considered it to be obsolete. The rugged fighting in Southeast Asia in the Sixties provided combat conditions

ideally suited to the Skyraider's performance. Its slow cruising speed and incredible payload capability enabled Navy and Marine pilots to support friendly forces with pinpoint accuracy. Agile Skyraiders attacked and destroyed two MiG-17's in 1965 to achieve what was considered an impossible feat. The versatility of the Skyraider was recognized by the U. S. Air Force, and overhauled Skyraiders eventually served with the U. S. and South Vietnamese Air Forces.

Your model depicts an AD-6 Skyraider of U. S. Navy Squadron VA-155 during the Korean War.
