

M151A2 TOW MISSILE LAUNCHER

chong-hoem

13406

1/35th M151A2 토우미사일차량

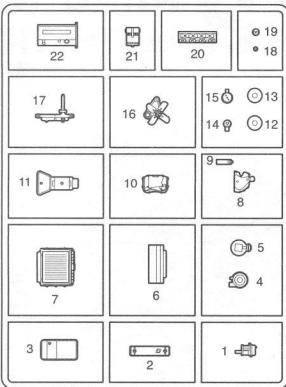

In 1951, the Ford Motor Company was given a contract a MUTT(Military Utility Tactical Truck) to replace the WWII era MB Jeep and its descendant of the M38. This new 1/4 ton 4WD vehicle would introduce new technologies such as a Uni-body Chassis and all wheel independent suspension system to the jeep type vehicle. In 1960, the first production contract was signed to produce over 10,000 units, and it would be used by whole U.S army and many other foreign military forces. The production of the M151 was not continued for a long time. It is because M151 had a serious problem with the suspension that made the M151 unstable and give a possibility to roll-over in the tight cornering situation. In order to provide the infantry with heavier fire-power, US and many other countries mounted recoilless rifle and missile system in the small trucks and APCs. In the 1960's, Hughes Aircraft Company developed the BGM-77A or TOW(Tube launched, Optically tracked, Wire guided)missile system to replace earlier generation weapons. This system was designed as a Heavy Anti-Tank Weapon to engage targets at range from 62m to 3700m. This Heavy Anti-Tank Weapon doubled the fire-power of the M40A2 106mm recoilless rifle. The mounting system of the M232E1 1/4 ton consisted of the launcher and M220 Optical Tracking System mounted on a fixed pedestal with a control box secured to the floor next to it. The M151 also carried two spare missiles and a tripod mount that allowed the launcher and tracking system to be deployed at some distant from the vehicle.

1951 erhielt die Ford Motor Company den Auftrag zur Entwicklung eines Nachfolgers für die veralteten MB/GPW, M38 und M38A1 (Jeep). Nach diversen Prototypen entschied sich das Army Ordnance Truck Automotive Command für ein Fahrzeug mit selbsttragender Ganzstahlkarosserie, Einzelradaufliegung v/h, 24 Volt wasserdricker Elektrik, Zwei- bzw. Allradantrieb und Vierganggetriebe. Im Jahre 1960 wurde der erste Produktionsauftrag an Ford vergeben und das Fahrzeug erhielt die Bezeichnung M151, 1/4ton, 4x4 utility truck. 1963/1964 erschien eine überarbeitete Version mit einer verstärkten hinteren Radaufhängung. Diese war aufgrund von Problemen bei erhöhter Zuladung nötig geworden. Der geänderte Typ wurde M151A1 genannt. Die Produktion wurde von 1964 bis 1969 fortgesetzt, zuerst bei Ford und Willys, später dann auch bei Kaiser, AMC, AM General. Wegen seiner hinteren Pendelachse hatten die M151 und M151A1 die Tendenz zum Übersteuern und bei zu aggressiver Kurvenfahrt sogar zum Überschlagen. Daher wurden an die Truppen Warnungen und Hinweise ausgegeben. Ab 1970 wurde darum der verbesserte M151A2 ausgeliefert. Um die Infanterie mit einer höheren Feuerkraft zu versehen, rüstete man die Fahrzeuge auch mit rückstoßfreien 106mm Geschützen (ACADEMY 13003) oder mit TOW Raketenwerfern aus. Die TOWs waren optisch über einen Draht lenkbar und stellten eine höchst wirksame Panzerabwehrwaffe bis zu 3700m Reichweite dar. Die TOW MUTTs hatten zwei Ersatzraketen an Bord sowie einen Dreibein Ständer zum Einsatz der Waffe außerhalb des Fahrzeugs.

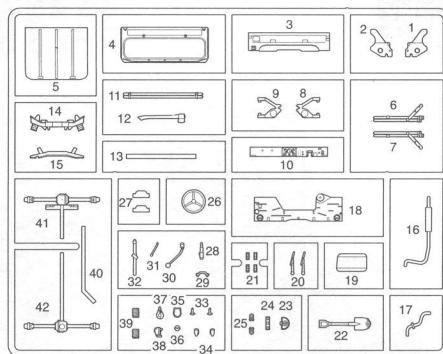

M151A2 군 다용도 전술트럭(Military Utility Tactical Truck)은 1970년대부터 생산이 시작 되었으며, M151A1에서 문제가 되었던 후륜 서스펜션의 개량이 이루어졌다. M151A2는 외관상으로는 전륜의 휠더에 대형 지시등의 설치와 방풍의 형상 등의 차이점을 보이며, M151A2는 사용목적에 맞게 여러 형식의 차량으로 개조, 운용 되었다. M151A2 TOW 미사일 발사 차량은 M825로 부르기도 하며, TOW 발사차량에 4명의 병력과 예비탄두 무반동총에 2명의 병력이 탑승하여 행동한다. TOW(Tube-launched Optically-tracked Wire-guided)시스템은 1960년대 중반까지 쓰이던 M40 106mm 무반동총을 대신해 개발된 소형 전술 미사일로 가볍고 취급이 간단하며, 높은 명중률을 특징으로 한다. TOW는 삼각대, 선화대, 발사튜브, 광학 조준기, 유도용 컴퓨터의 5가지로 구성되어 있으며 모든 장비는 분체, 결합이 용이한 조립식으로 이루어져 있어 휴대가 간편한 장점이 있다. TOW시스템은 M151과 같은 1/4t 차량에 탑재가 가능하며, 가장 강력한 대전차 화기로 평가 되고 있다.

<READ THIS BEFORE YOU BEGIN>

- Study the instructions before assembling.
 - Check the fit of each piece before cementing into place.
 - Do not use too much cement to join parts.
 - Never use cement or paint near open flame.
 - Open a window or make area well ventilated when cement or paint is in use.
 - Tear up and throw away the empty plastic bags to avoid danger of suffocation for little children.
- <ALLGEMEINE HINWEISE>**
- Die Anordnung der Bauteile ist aus den Zeichnungen der Anleitung ersichtlich.
Die Teile vor dem Verkleben ungelöst zusammenhalten, um Ihren Platz zu prüfen.
- Klebstoff nicht zu dick auftragen.
- Klebstoff und Farben niemals in der Nähe einer Flamme verwenden.
- Während der Befestigung mit Spritzpistole oder Pinsel für frische Luftzufuhr, z.B. öffnen des Fensters, sorgen.
- Bodensatz von kleinen Kindern fernhalten. Verhüten Sie, daß Kinder irgendwelche Bauteile in den Mund nehmen oder Plastiktüten über den Kopf ziehen.

<LESEZ CE QUI SUIT AVANT DE COMMENCER LE MONTAGE>

- Etudier les schémas d'assemblage.
- Contrôler que chaque pièce soit bien conforme avant de la coller à sa place.
- N'utilisez pas trop de colle pour réunir les pièces.
- Ne jamais manipuler la colle ou peinture à proximité d'une flamme.
- Aérer suffisamment la pièce où vous peignez (ouvrir la fenêtre).
- Après avoir collé, laisser les pièces du socle en plastique décliner le socle afin d'éviter que les enfants ne le mettent sur la tête et ne s'étouffent.

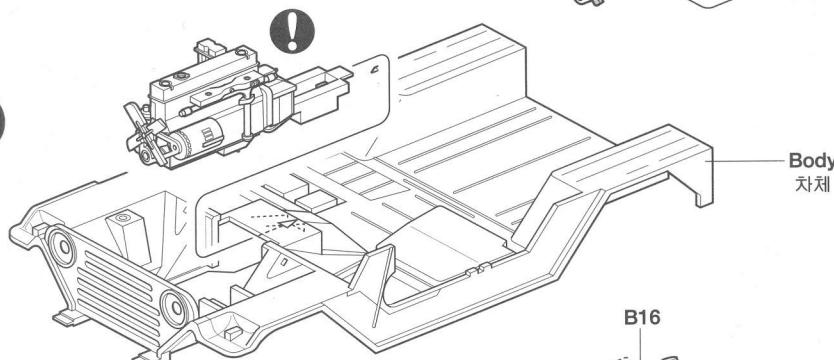

<組み立てる前に>

- 組み立てる前に部品を組み立てるお読み下さい。 - 部品をランナーから切りはずす時は模型用ニッパーとカッターを使用します。
 - 接着剤を少なめに使うことをおすすめします。組み立て後の部品やニール等は小さな子供の手の届かない安全な場所に保管して下さい。
 - 接着剤を溶剤で落とす場合ははさみとガムを開いて換気をえきましょう。 - 接着する前は部品を洗っておきま。
- # 조립하기 전에**
- 부품을 조립하기 전에 부품을 잘 살펴보니 후 조립합니다. - 부품을 조립하는 때에는 잘이나나 나마로 고정해 잘립니다.
- 조립하는 때는 사용 중 고리나 사용하지 않는 고리 주워하고 낸다. 잎과 버터지 모았습니다. - 조립하기 전에 부품을 맞추어 확인한 후 조립합니다.
- 예상 레이트나 접착제를 사용할 때는 청정을 얻어 액기기를 사용하고 회기장을 열리합니다.
- 시공 후 남은 부품은 어떤 종류의 손에 딸지 않도록 잘 처리합니다.
