

This accessory set is designed to display the M26 Dragon Wagon with the rear wheels off and chains removed during maintenance. Note that there are a “tall” and “short” brake drum which corresponds to the Tamiya kit parts H23 and H24. Depending on which side you want to display the wheels off of the model determines where the “tall” and “short” brake drum goes. The “tall” brake drum goes on the rear axle on the drivers side and on the front axle on the passenger side. The wheel studs are not included, these may be represented by styrene rod or 8mm x 2.5mm UNM bolts can be purchased from Scale Hardware:
