

Mosquitos on the Stockholm run

When B.O.A.C. first conducted wartime flights between Sweden and the UK, they were operating a fleet of Lockheed Hudsons and Lodestars. The arrival of the Focke Wulf Fw190 on airfields in Denmark and Norway made these flights very hazardous, so B.O.A.C. requested faster aircraft to give the crews a chance to outrun their most lethal opponent. In December 1942, B.O.A.C. took delivery of their first Mosquito – a single Mk.IV (carrying the registration G-AGFV) which made its first flight to Stockholm on 4 February 1943, and paved the way for further deliveries of Mosquitoes, these being based on the FB Mk.VI, Six Mosquito Mk.VI aircraft, registered G-AGGC - G-AGGH, were received in April and May 1943. A further three aircraft, G-AGKO, G-AGKP, and G-AGKR, were received in April 1944 as replacements for aircraft lost in accidents. This decal sheet include decals for the first batch of six Mk.VIs. These aircraft had Night letters on the upper surfaces and sides. Due to space limitations on the sheet, we have chosen to include letters to represent only the first three Mk. VIs, however the letters F, G and H can easily be constructed by cutting and rearranging the included letters. Decals for the three aircraft of the second batch are not available on this sheet.

In addition to carrying vital war materials like ball bearings, passengers were carried on a mattress on the closed and locked forward bomb doors - a thermos flask of tea being the only in flight service, but at least it was free.

The sole Mk.IV was originally painted in the standard Civil Land Scheme of Dark Green and Dark Earth upper surfaces with Sky (or "duck egg blue" as it was referred to) lower surfaces. As B.O.A.C.'s aircraft were mainly flying over water on the route to and from Sweden, the airline made a request to the Air Ministry to paint the aircraft in "sea colours" on the upper surfaces, i.e. Extra Dark Sea Grey and Dark Slate Grey. Although the Air Ministry weren't completely convinced by B.O.A.C.'s arguments, this request was granted, and the first six Mosquito Mk.VIs were delivered in these colours. After a few months in service, B.O.A.C. made a new request to paint the undersides black (Night) — this too was approved, and the aircraft had their lower surfaces repainted in Night in August (except from G-AGGF which crashed on 17 August after only four flights to Stockholm and had been written off). The three attrition replacements were delivered in Extra Dark Sea Grey. Dark Slate Grey and Night.

Registration letters on the fuselage and wing upper surfaces for G-AGGC to G-AGGG were Medium Sea Grey, and Night on a background of Sky. When the aircraft were painted with Night lower surfaces, these registration letters too were painted Medium Sea Grey.

The directives specified that aircraft with Night undersides should have Red and Blue identifications stripes on the undersides. However photos reveal that Red, White and Blue stripes (decals B - E) were carried, at least on the initial batch of aircraft. It is believed that the BOAC Speedbird logo on the nose was in black with a silver border. We have however provided an alternative Speedbird in blue and silver if your research indicates this to be correct.

Modelling notes

Good kits of the Mosquito Mk. VI are available from Tamiya and Airfix. Both capture the look of the Mosquito very well, but the Tamiya kit has the edge in fit of parts, detail and has engraved panel lines. It also includes the 50 gallon slipper tanks whereas the Airfix kit does not. These decals have been sized for the Tamiya kit, but should also work on the Airfix kit with minimal trimming. For a B.O.A.C. Mosquito Mk.VI the armament should be removed and the cannon ports filled. Note that the propellers were of the narrow chord type and that all aircraft feature unshrouded exhausts. 50 gallon slipper tanks were carried as standard.

These decals have been designed after extensive research in the National Archives and the British Airways Heritage Collection, as part of research for a forthcoming book on the Stockholm run. B.O.A.C.'s sole Mosquito Mk.IV aircraft was marked differently, so these decals can not be used for modelling that aircraft, B.O.A.C.'s Mk. IV is featured on Vingtor Decals sheet No. 48-106. The decals are also available in 1/72 scale.

Decal application

The decals have a very thin carrier film and need to be handled with care. Individual decals should be cut out and soaked for a few seconds in lukewarm water. Slide the decal from the paper over to the model's surface without wrinkling. Avoid moving the decal excessively to avoid tearing the film and washing off the adhesive. The carrier film might at first seem rigid and difficult to lay down over complex surfaces, but using decal solutions like Micro Set and Micro Sol will make them snuggle down over detail and make them look painted on when completely dry. For best results, decals should always be applied to a closs surface.

It is recommended to first apply the identification stripes to the wings and fuselage and let these dry completely before applying the registration letters. The stripes will help you in aligning the letters.

Thanks

Thanks to Jens Håkon Brandal for help with the instructions
