Correct Method for Applying Decals
This correct method for applying decals can be used for most vinyl surface types. If you have any concerns, we suggest you test a small area before proceeding with the entire model.
1. Clean the surface to be decaled with a cloth that has been dampened with alcohol. Do not use water or any other solvent as it will damage the plastic and cause the decal to bubble. Never apply a decal to a wet surface.
2. Hold the decal in place with tweezers. It is best to work from the center of the decal outwards, avoiding any sharp corners or folds.
3. Press the decal firmly onto the surface with your thumb, working from the center outwards towards the edges.
4. Once the decal is applied, smooth it down with a soft cloth to remove any air bubbles and ensure it is firmly attached.
5. Finally, use a soft, dry cloth to remove any excess adhesive that may have been applied to the surface.
6. If any bubbles remain, gently pop them with a needle or pin and re-smooth the decal.
7. Allow the decal to dry completely before applying any paint or varnish.

Decals
Decals are printed on a thin, flexible plastic film.
When handling the film, avoid any sharp bends, as it is very easy to damage the surface.
If any damage does occur, gently remove the decal from the film and apply it again to a new area.
If the decal cannot be applied correctly, please do not use it and return it to us for a replacement.
