Famed as the United States Navy's last propeller driven attack aircraft, the ungainly Douglas "Skyraiders" served operationally for more than twenty years. Although they were recognized primarily as attack aircraft, variants of the "Skyraider" appeared as early warning pickets, night attack aircraft, and anti-submarine warfare airplane. More than 3100 Skyraiders were constructed over a span of twelve years.

The "Skyraiders" first saw combat in the war torn skies over Korea, but they achieved aviation history long after most military strategists considered them to be obsolete. The rugged fighting in Southeast Asia in the Sixties provided combat conditions ideally suited to the "Skyraider's" performance. Their slow cruising speed and incredible payload capability enabled Navy and Marine pilots to support friendly forces with pinpoint accuracy. Agile "Skyraiders" attacked and destroyed two MiG-17's in 1965 to achieve what was considered to be an impossible feat. The versatility of the "Skyraiders" was recognized by the U. S. Air Force, and overhauled "Skyraiders" eventually served with U. S. and South Vietnamese Air Force. With the inevitable passage of time, the "Skyraiders" were replaced by more advanced Grumman "Intruders," but they left their mark in the annals of military aviation history.
