One of the deadliest weapons in the skies today is the attack helicopter, the most formidable of these being the Soviet Mil Mi-24 Hind. This weapon is seen in two major variations, the Hind A, with an angular cockpit greenhouse, and the Hind D, with a unique double-bubble arrangement for the two pilots. Both versions are equipped to carry up to eight fully armed troops plus heavy loads of weapons and support equipment, a characteristic unique to the Hind.

The Hind D version, depicted by this Monogram model, is specifically designed for the ground attack role, and carries a nose-mounted 12.7mm four barrel rotary cannon. Additional guns can be mounted on the stubby wings, along with a variety of the ground attack missiles and bombs. Two of these helicopters were delivered to the West by defectors in 1986.

Production of this deadly machine began over ten years ago and several hundred have been exported to countries outside the Warsaw Pact. Most notable have been the Hinds used by the Soviet-backed puppet government in Afghanistan and those now fighting with the Sandinistas in Nicaragua, about 300 miles south of Mexico.

The Mi-24 is fast, having a top speed of nearly 200 mph, due to a pair of stubby wings which provide nearly 25% of the lift at cruise. This also makes the Hind quite maneuverable, but it has a combat range of only 99 miles.

Your kit of the Hind D comes with markings for these helicopters used in Afghanistan, Czechoslovakia, Nicaragua and by the Soviet Union.
