

Adalbertus #48504 M4 Pressed steel wheel set.

Wheels in Sherman tanks were replaced or changed due to damage frequently. On photos you can see that late version tanks have early wheels and early version tanks have late wheels. Set includes: complete road and idler wheels for one tank with two spares for stowage. Every part fits Tamiya kit perfectly. Improvement to kit parts are small detail like lubrication jacks and vents, rivets, as well as full "back side" detail of pressed wheels. Tamiya kit wheels are missing. Suitable for all Sherman versions with VVSS suspension.

Painting guide:

Road wheel: overall camouflage color. Rubber bandage – dark gray. Bandage steel rim – natural metal. Idler wheel: overall camouflage color, with natural metal surfaces brushed by track.

I wish you great enjoyment building models from Adalbertus. Your comments and suggestions are welcome. It would help me in evaluation of next models. Contact: email wbulhak@acn.waw.pl or by snail mail on address you find on the box.
