

This set provides the type of FLIR turret and mount used by Belgian Air Force Sea King Mark 48s. It was also the first FLIR turret used by the Royal Norwegian Air Force on their Sea King Mk.43s (they later replaced it with a different model).

Note the different colours of the FLIR turret and mount as used by the 2 Air Forces - also the way the turret is mounted.

use the lead wire supplied to form the control and data cables as shown in the photographs

NB: be sure to remove any remaining moulding attachment points before use
