

RED ROO MODELS AUSSIE WARBIRDS

AW48001

P-51D NAA Mustang A68-769, 82 Squadron RAAF, Iwakuni Japan, 1947

Using this Decal Sheet

This sheet has been printed on an Alps dry ink thermal printer. The decals are printed on very thin carrier film. Normally we would encourage modellers to trim the decal film, but in this case, we strongly advise you to leave about 1mm of carrier film around the object. This will avoid any of the decal chipping. The colours will appear to be quite translucent when floated off the decal paper, but do not be concerned, against their white backing they will assume the correct tone, hue and opacity. The black decals are opaque. Ensure model has received a suitable coat of gloss varnish before applying these decals. Cut around the required decal. Soak the decal in water for about 15 seconds, then remove the decal from the water and stand on glass, foam or plastic surface. Moisten the application site with your favourite settling solution. Remember, the carrier film on these decals is very thin, test the effect of your settling solution on an unwanted decal if in doubt.

Ensure that you use a generous amount of settling solution and water on the surface to which the decal is to be applied. If you need to adjust the position of the decal please use a long, soft bristle brush to avoid damaging the decal. Using a pin or tweezers for this *will* tear the decal. Once the decals are in position allow at least 24 hours to dry. Wash any excess solution from the model with a very soft cloth or a facial tissue. Apply a coat of gloss varnish and allow to dry before applying the finishing coat of matt varnish. Please note: these decals may react to varnishes with strong solvent solutions. Spray several light coats of matt varnish onto the model to achieve the desired effect. We recommend using *Future*, *Long Life* or *Super Stride* for gloss coats. Because these decals are printed on a dry ink thermal printer there may from time to time be a slight exposure of the white backing. In this event you will need to touch up the local camouflage colour with paint (use a 20/0 pointed round brush for this). Perform any touch up *before* you apply the final gloss varnish and matt varnish coats.

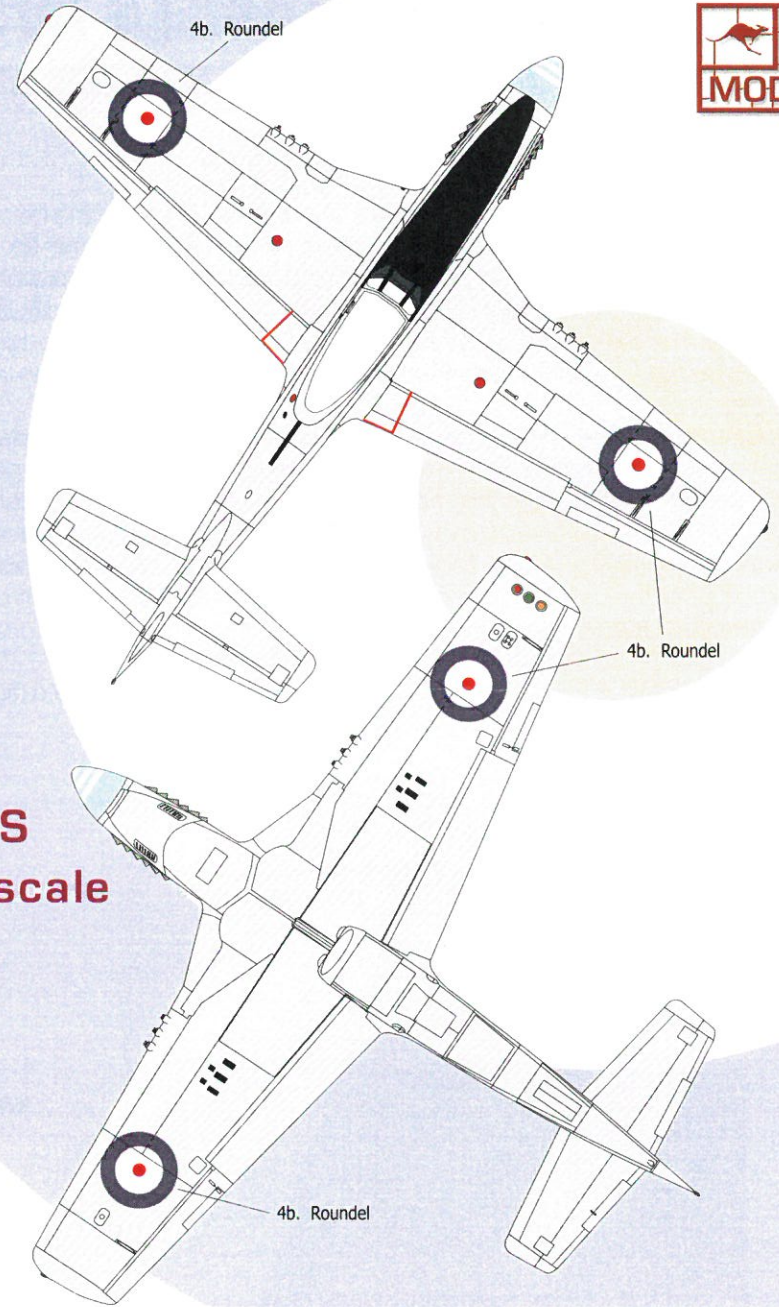

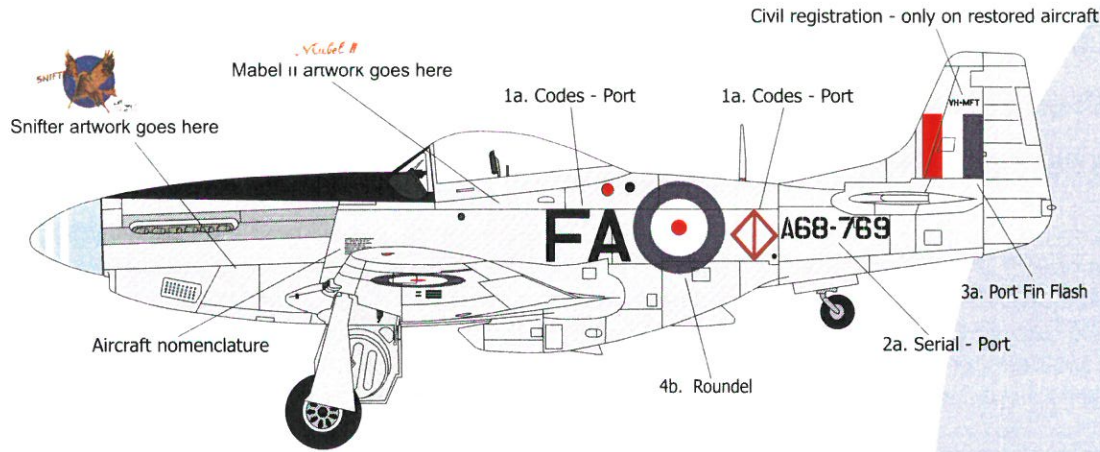

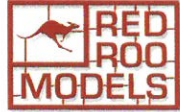

These decals are limited run 'boutique' decals and as such have a slightly higher price than those in our standard and 'Odds and Sods' ranges. Only 200 sheets will be printed for each subject.
