

Mouse Armour

1/35 scale kit
MA116
Leopard AS1 "slanted"
photoetch turret basket

Background

The Australian Leopard AS1 MBT had a range of rear turret baskets over its service life

- 1977 – nil and two jerrycans on the rear face of the turret;
- 1985 – Modified Centurion turret basket and one jerrycan;
- 1989 – two turret baskets with the front face of the basket conforming to the rear turret slope;(MA116)
- 1990s – two square turret baskets with bottom stand off legs (MA117); and
- 2004+ – full width turret basket. (MA121)

The photoetch fret provides:

| | | |
|--------------------------|--|---|
| 1 x narrow turret basket | 1 x engine mesh | 3 x basket hangers (one with bolt) |
| 1 x wide turret basket | 2 x wind sensor brush guards (only one needed) | 4 x hooks for searchlight when it is stowed |

Tools

Handy tools would include a sharp model knife and photo etch bending tool. Although a chisel style blade and a steel ruler will also work.) Super glue will also be required.

Safety

Do not get the superglues anywhere near your eyes..

Construction

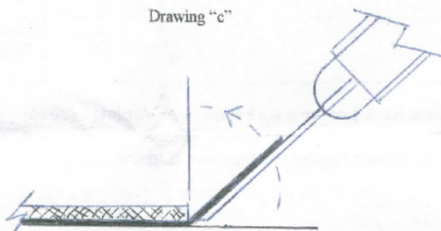

Drawing "b"

Drill holes as shown.
 Glue tabs into holes. Feet should rest on top of turret.

1. Place the wind sensor (see MA120).
2. Drill holes for brush guard feet
3. Bend brush guard to shape and superglue in place.

To form Baskets, rest the Photo Etch part on a flat surface. Rest the edge of a steel rule at the line where you wish to bend. Ease a chisel edge hobby knife under the part you wish to bend, and rotate it up through 90 deg.

Bend the common edges first, followed by the sides, then the rear, then the Bottom. Glue together.

| | |
|--------------------|--|
| | <p>The turret baskets are made from angle iron and mesh.</p> <ol style="list-style-type: none"> 1. Bend the angle iron to shape 2. Bend the sides to shape to make a box; 3. Superglue together <p>The hooks hang / attach the basket to the rear of the turret.</p> <ol style="list-style-type: none"> 1. The two plain strips are bent to a "U" shape and glued upside down (open facing down) – see position "X" to the basket 2. The strip with the embossed nut is bent to form a right angle. It is placed in position Y – between the armoured bin (right) and the centre open bin. 3. You can glue basket A and B together where they come in contact. |
| <p>Engine mesh</p> | <p>Replace kit mesh provided by Italeri and Tamiya Leopard kits</p> |
