Hawker Aircraft Company showed great foresight in March of 1934 when their chief designer, Sidney Camm learned of a new Rolls-Royce engine under development and began the design of a new monoplane to take advantage of the new RR engine. This began as a private venture with no funds from the British Government representing a great financial risk to the company. The Air Ministry gave instructions to produce a prototype in January, 1935 which flew in November, 1935.

It was powered by a 990 hp Merlin "C" engine equipped with a two-bladed fixed pitch wooden propeller and armed with 8 Browning .303 machine guns. Top speed was 315mph at 16,200 feet. The results of the trials convinced Hawker to prepare for the production of 1000 aircraft before actually receiving a government order. Because of this preparation, when the first order for 600 aircraft was received, drawings began to reach the production shops and the first production aircraft flew on October 12, 1937. Apparently Hawker Aircraft Company had a different view of Adolph Hitler than did the Labour Government.

The fabric covered wings on the earliest version was due to the fact that Hawker did not have the experience or the equipment to make metal stressed skin wing coverings. The second order for 300 aircraft had an armored windscreen, the Merlin III engine and a 3 bladed propeller. This kit includes both types of propellers, exhaust, windscreens, lower tail section and wheels for the fabric wing versions. Various countries ordered the Hurricane MK.I including Belgium, Finland, Yugoslavia and Rumania.

These versions led to the production of the metal wing version which, during the Battle of Britain took on the German bombers while the Spitfires fought the Me.109's. It undoubtedly made a significant contribution to the defeat of the Luftwaffe over Great Britain. Later versions were used as ground attack aircraft to great effect.

We wish to thank all of those whose help we had in creating this kit. Without their help, it would not have been possible. We hope you like it. Thank you and

Best Regards,  
Ken & Mary Ellen Lawrence
