

F6F-3 Hellcat

Parts Identification. Remove shaded areas

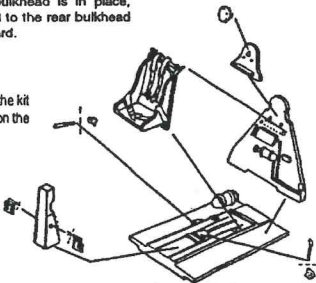

Glue the kit (E24) headrest to the kit armor plate (E30). Glue this assembly in place on the TD rear bulkhead.

After the rear bulkhead is in place, glue the TD Seat to the rear bulkhead and the floor board.

Remove the bottom part of the kit handle part E22 and install on the floor board.

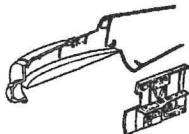

Cut the kit rudder pedals (E35) as indicated. Glue the left & right rudder pedals in place on the TD Pedestal. Glue the pedestal assembly in place on the floorboard.

Remove the lower part of the kit control stick (E27) and install the stick in place on the boot.

General Color Notes

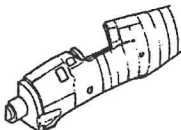

Cockpit Interior: FS34151 (Interior Green) with FS37038 (Flat Black) Equipment boxes and control panels. Seat: FS34151 (Interior Green) with FS37778 (Off White) Shoulder belts, FS34201 (Khaki Green) Lap belts and SF17178 (Silver) Buckles.

Glue the throttle panel and fuel selector in place on the left side panel. The throttle panel will align with the rib on the side panel.

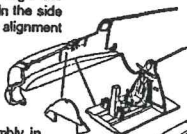

Remove the surface detail in the areas that will be covered with the TD side panels. Glue the TD Side panels in place checking alignment with the floor boards and upper edge of cockpit opening.

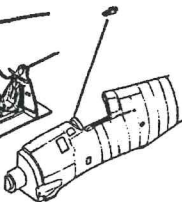

Instrument panels are provided for the -3 and -5. Glue the panel of your choice in place on the right fuselage half. Align the panel with the cutout in the side panel and the molded alignment rib on the fuselage.

Install the gunsight after the fuselage is glued together.

Glue floorboard assembly in place on right fuselage side. Align the rear bulkhead with the aft edge of the side panel. The top of the pedestal goes behind the instrument panel and fits against the top of the fuselage.

F6F-3 Hellcat

Cockpit Detail Set TD48461

(Recommended for the 1/48th scale Hasegawa kits)

*These are resin parts. Super Glue or epoxy must be used for gluing

Congratulations on purchasing another fine True Details product. For added realism on your Hellcat use our Flattened and Bulged Wheels.

48013

48045

Our wheels have accurate wheel/hub detail and tread pattern. They are bulged to give your model the realistic look of a loaded aircraft.
