SUKHOI SU-27 FLANKER B

When the SU-27 performed its "Cobra", maneuver at the 1989 Paris Air Show, the western world suddenly learned that the SU-27 design was very probably the finest fighter plane in the world. To see this very large airplane fly at an attack angle of 120 degrees without crashing, shocked every observer. Since then the routine has been performed as a demonstration feature at most air shows.

From 1977, when the prototype T-10 was spotted by satellite, until 1988, few hard facts and little information were available. It was thought that this twin-engined fighter plane had strong design resemblances to parts of the F-14, F-15 and F-18.

Between October 1986 and December 1988 a specially modified prototype T-10, known as the P-42 was used to establish 27 performance records which were submitted to the FIA for certification. All the records previously established by the F-15 Strike Eagle were wiped out by the P-42. When this information was published, it became general knowledge that this was an aircraft to be considered most seriously.

Some analyst think that the Russian avionics and weapons systems are not quite equal to the western competition, but in terms of speed, range and maneuverability, the SU-27 is superior to any aircraft in the western inventory. Probably until such time that the Lockheed F-22 is operational, the SU-27 must be regarded as the best fighter in the world.

Much of the SU-27's performance must be credited to its superb AL-31F engines which are rated at 12,500Kg(27,550lb) thrust in after-burner stage. The engines which are easy to maintain and interchangeable between left and right, have a tremendous tolerance to severely disturbed air flow. It is this feature that allows the engines to run smoothly while the Flanker performs these unusual maneuvers. Unlike earlier short-lived Soviet jet engines, the AL-31F engines have a life of 3,000 hours based on 100 hour engine checks and 1,000 hour overhauls. This is fully comparable to the best the west can offer.

Armed with four R-73 AA-73 Archer missiles for short range combat and an array of R-27 IR-homing long range missiles, the SU-27 also carries the same internal GSh-30-1 30mm cannon used by the MIG-29, Firing at a rate of 1,500 rounds per minute, the cannon barrels only have a life expectancy of 80 seconds before they must be replaced.

The SU-27 Flanker B, together with the MIG-29 give Russia air combat capability that is certainly equal to but most likely superior to that presently available to the west.

SU-27B FLANKER #2131

1. Yellow circular stickers with a radiation symbol.

2. Yellow rectangular stickers.

3. Yellow rectangular stickers.

4. Small rectangular stickers with a '6' and a dashed line.

5. Small rectangular sticker with a '5' and a vertical bar.

6. Yellow rectangular stickers with assembly diagrams.

7. Large red numerals '08 08'.

8. A grid of 12 red 'X' symbols arranged in 3 rows and 4 columns.

9. Red triangular wing section with white teeth.

10. Assembly instructions for parts 10 and 11.

11. Yellow rectangular stickers with assembly diagrams.

12. Yellow circular stickers with a 'Y' symbol.

13. Yellow rectangular sticker with assembly diagrams.

14. Yellow rectangular sticker with a 'Y' symbol.

15. Large red numerals '08 08'.

16. Large blue fuselage section.

17. Blue wing section.

18. Red triangular wing section with white teeth.

19. Large blue fuselage section.

20. Blue triangular wing section.

21. Red star.

22. Blue triangular wing section.

23. Three red stars.

24. Grid of 12 red 'X' symbols arranged in 3 rows and 4 columns.

25. Blue wing section.

26. Small rectangular stickers with assembly diagrams.

27. Small rectangular sticker with assembly diagrams.
