

de Havilland Mosquito PR.Mk.I/B.Mk.IV Series (I)
Assembly Guide
 (for use with Tamiya Kit 60753).

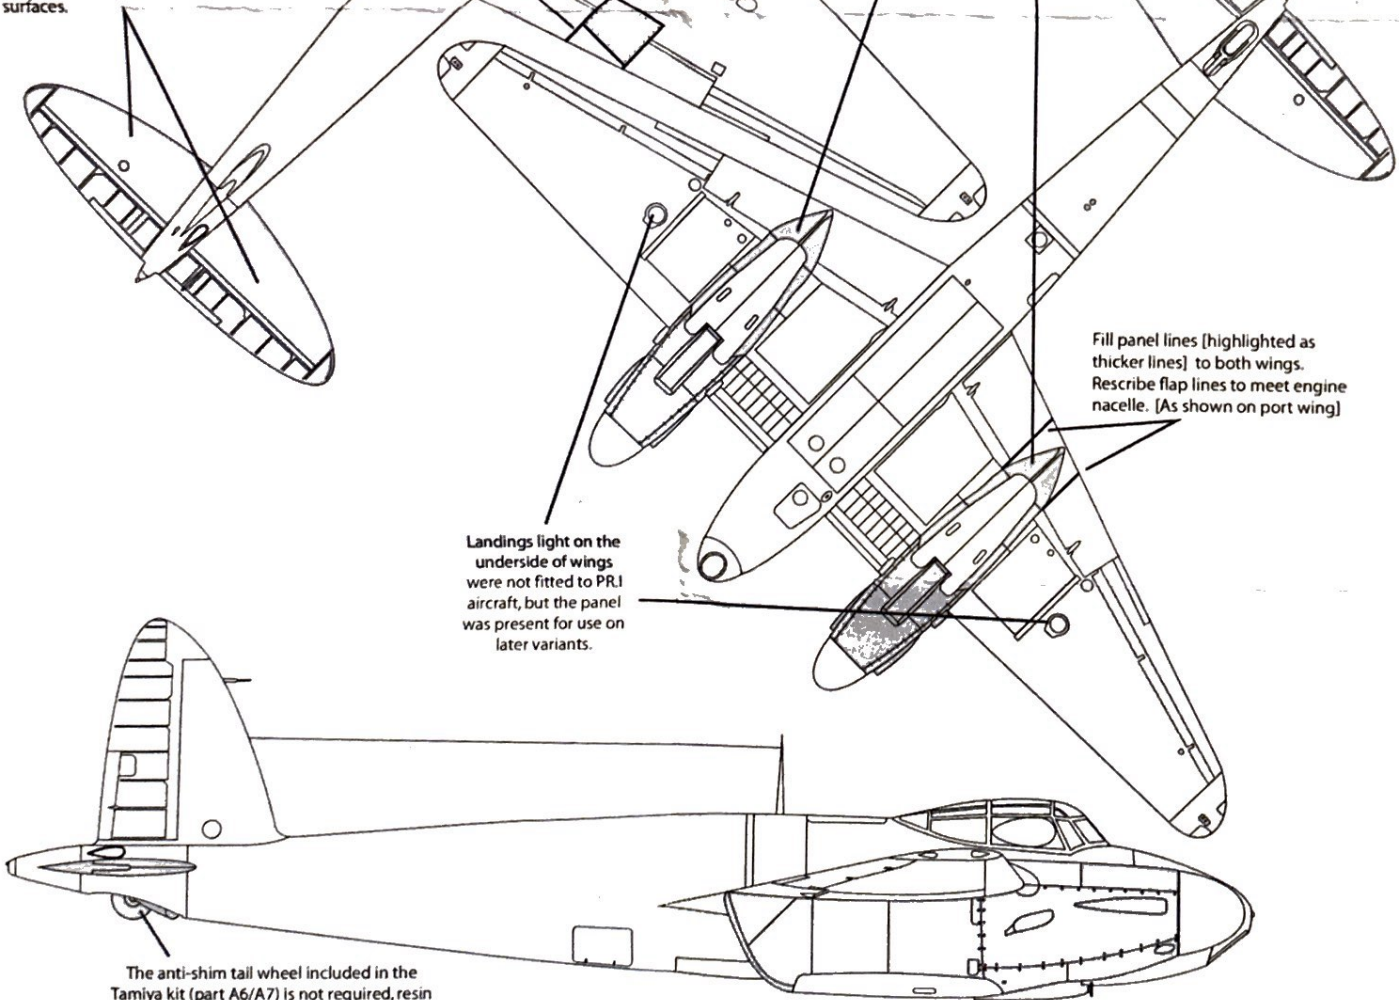

Fill panel lines [highlighted as thicker lines] and remove rivet detail to both wings.
 Rescribe flap lines to create continuous lines. [As shown on port wing]

The short style engine nacelles are direct replacements for kit parts A24, A26, A27 and A25. Parts B3 and B4 (upper wings) will need to be cut on the upper cowling area, at the first panel line back, the removed portion replaced by resin panel (as the series I cowling is slightly longer than kit part).

Resin short span tail planes replace kit parts B8 and B12. The new tail planes are not handed and can be fitted to either side of the fuselage. This will mean a small amount of filler will be needed to fill the gap of the new tail planes on the upper surfaces.

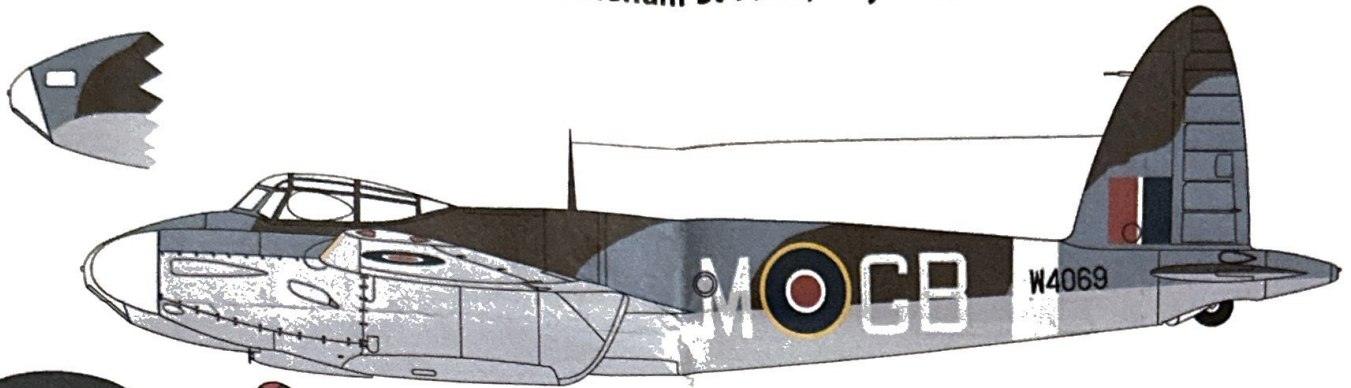

Fill panel lines [highlighted as thicker lines] to both wings.
 Rescribe flap lines to meet engine nacelle. [As shown on port wing]

Landings light on the underside of wings were not fitted to PR.I aircraft, but the panel was present for use on later variants.

The anti-shim tail wheel included in the Tamiya kit (part A6/A7) is not required, resin tail wheel is provided as a direct replacement.
